# BiztelAI — About Us

BiztelAI builds industrial vision and workflow monitoring and validation systems for real-time manufacturing operations. Our products help manufacturing teams improve process efficiency, workflow compliance, defect prevention, and operational traceability.

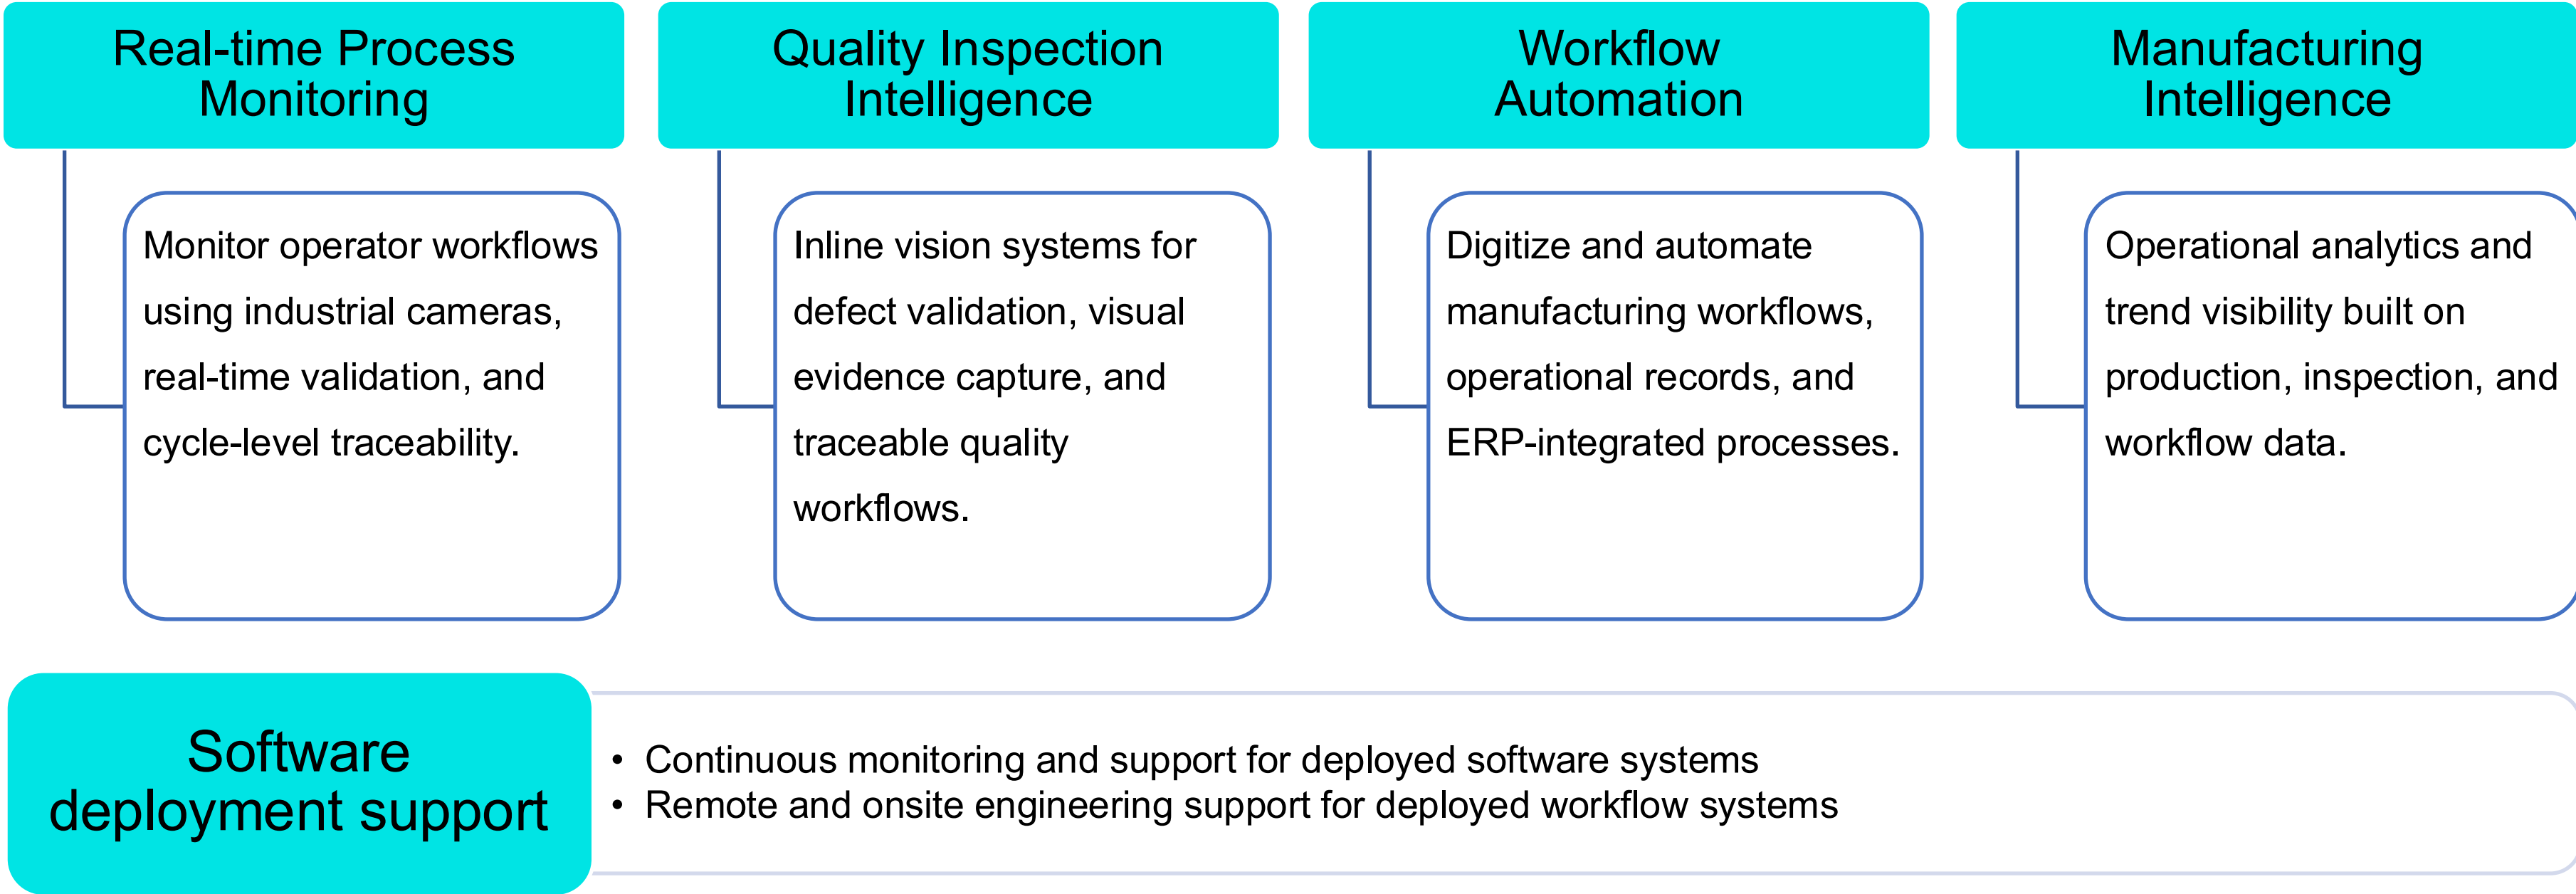

| Deployments Across                              |                                 |                                     |

| <ul style="list-style-type: none"><li>• Reduce process-based defects and errors.</li><li>• Improve workflow compliance.</li><li>• Reduce manual monitoring and reporting.</li><li>• Support lean manufacturing, digital transformation, and Industry 4.0 initiatives.</li></ul> |

# Product Portfolio

Major product lines for manufacturing operations

# 01

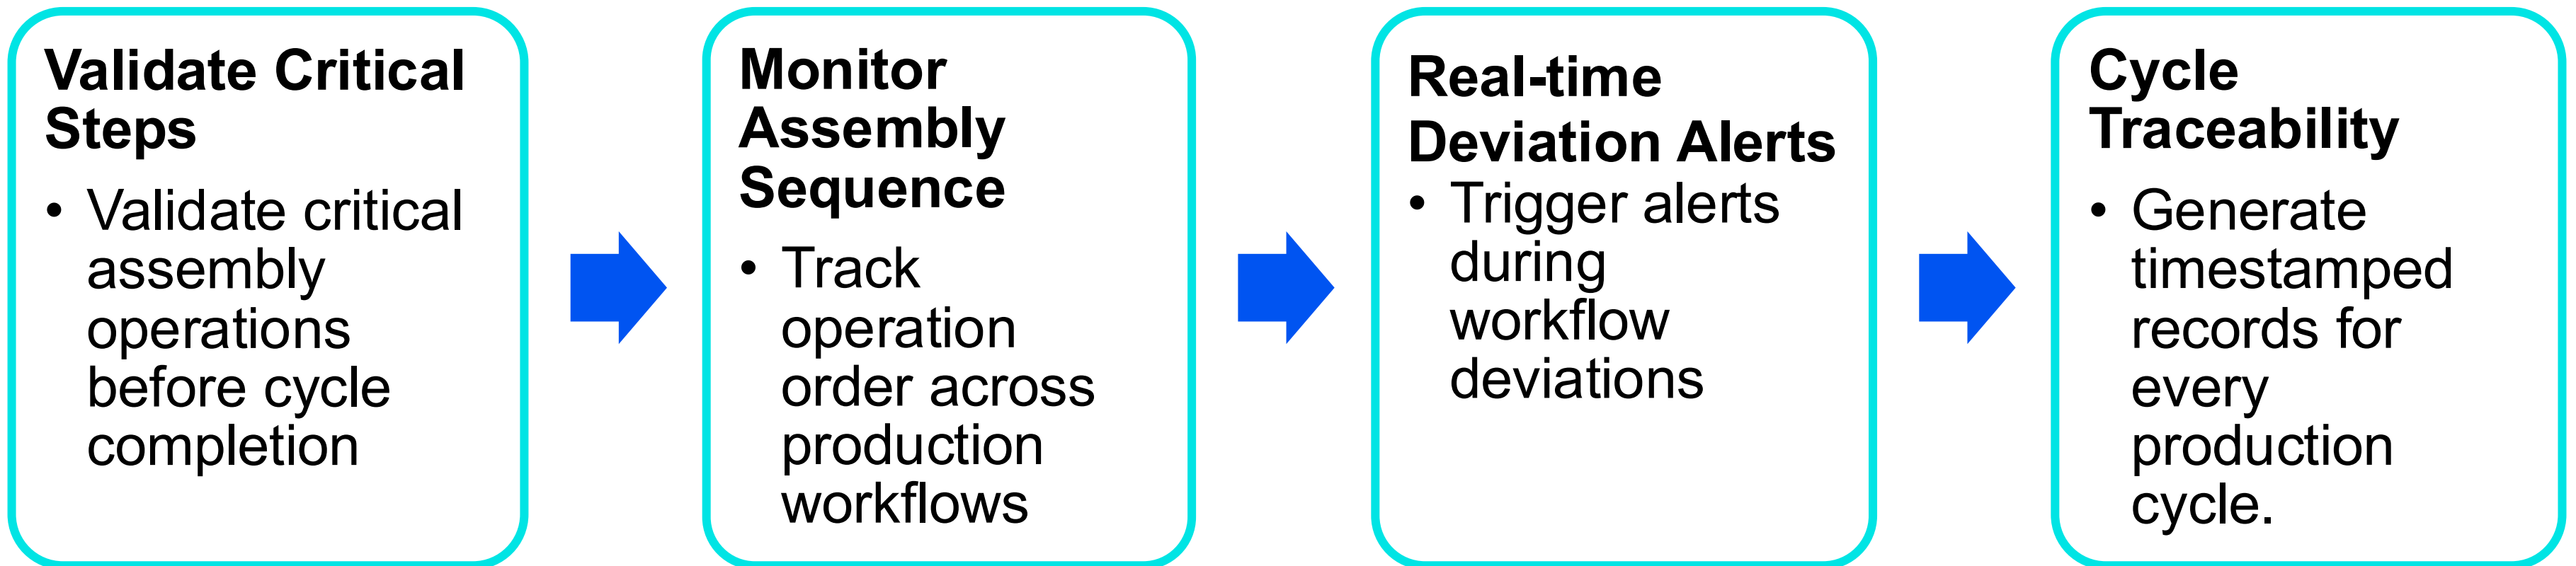

## Real-Time Process Monitoring

---

Real-time monitoring and validation of critical manufacturing workflows using industrial vision and edge AI.

# Validate Workflows in Real-Time

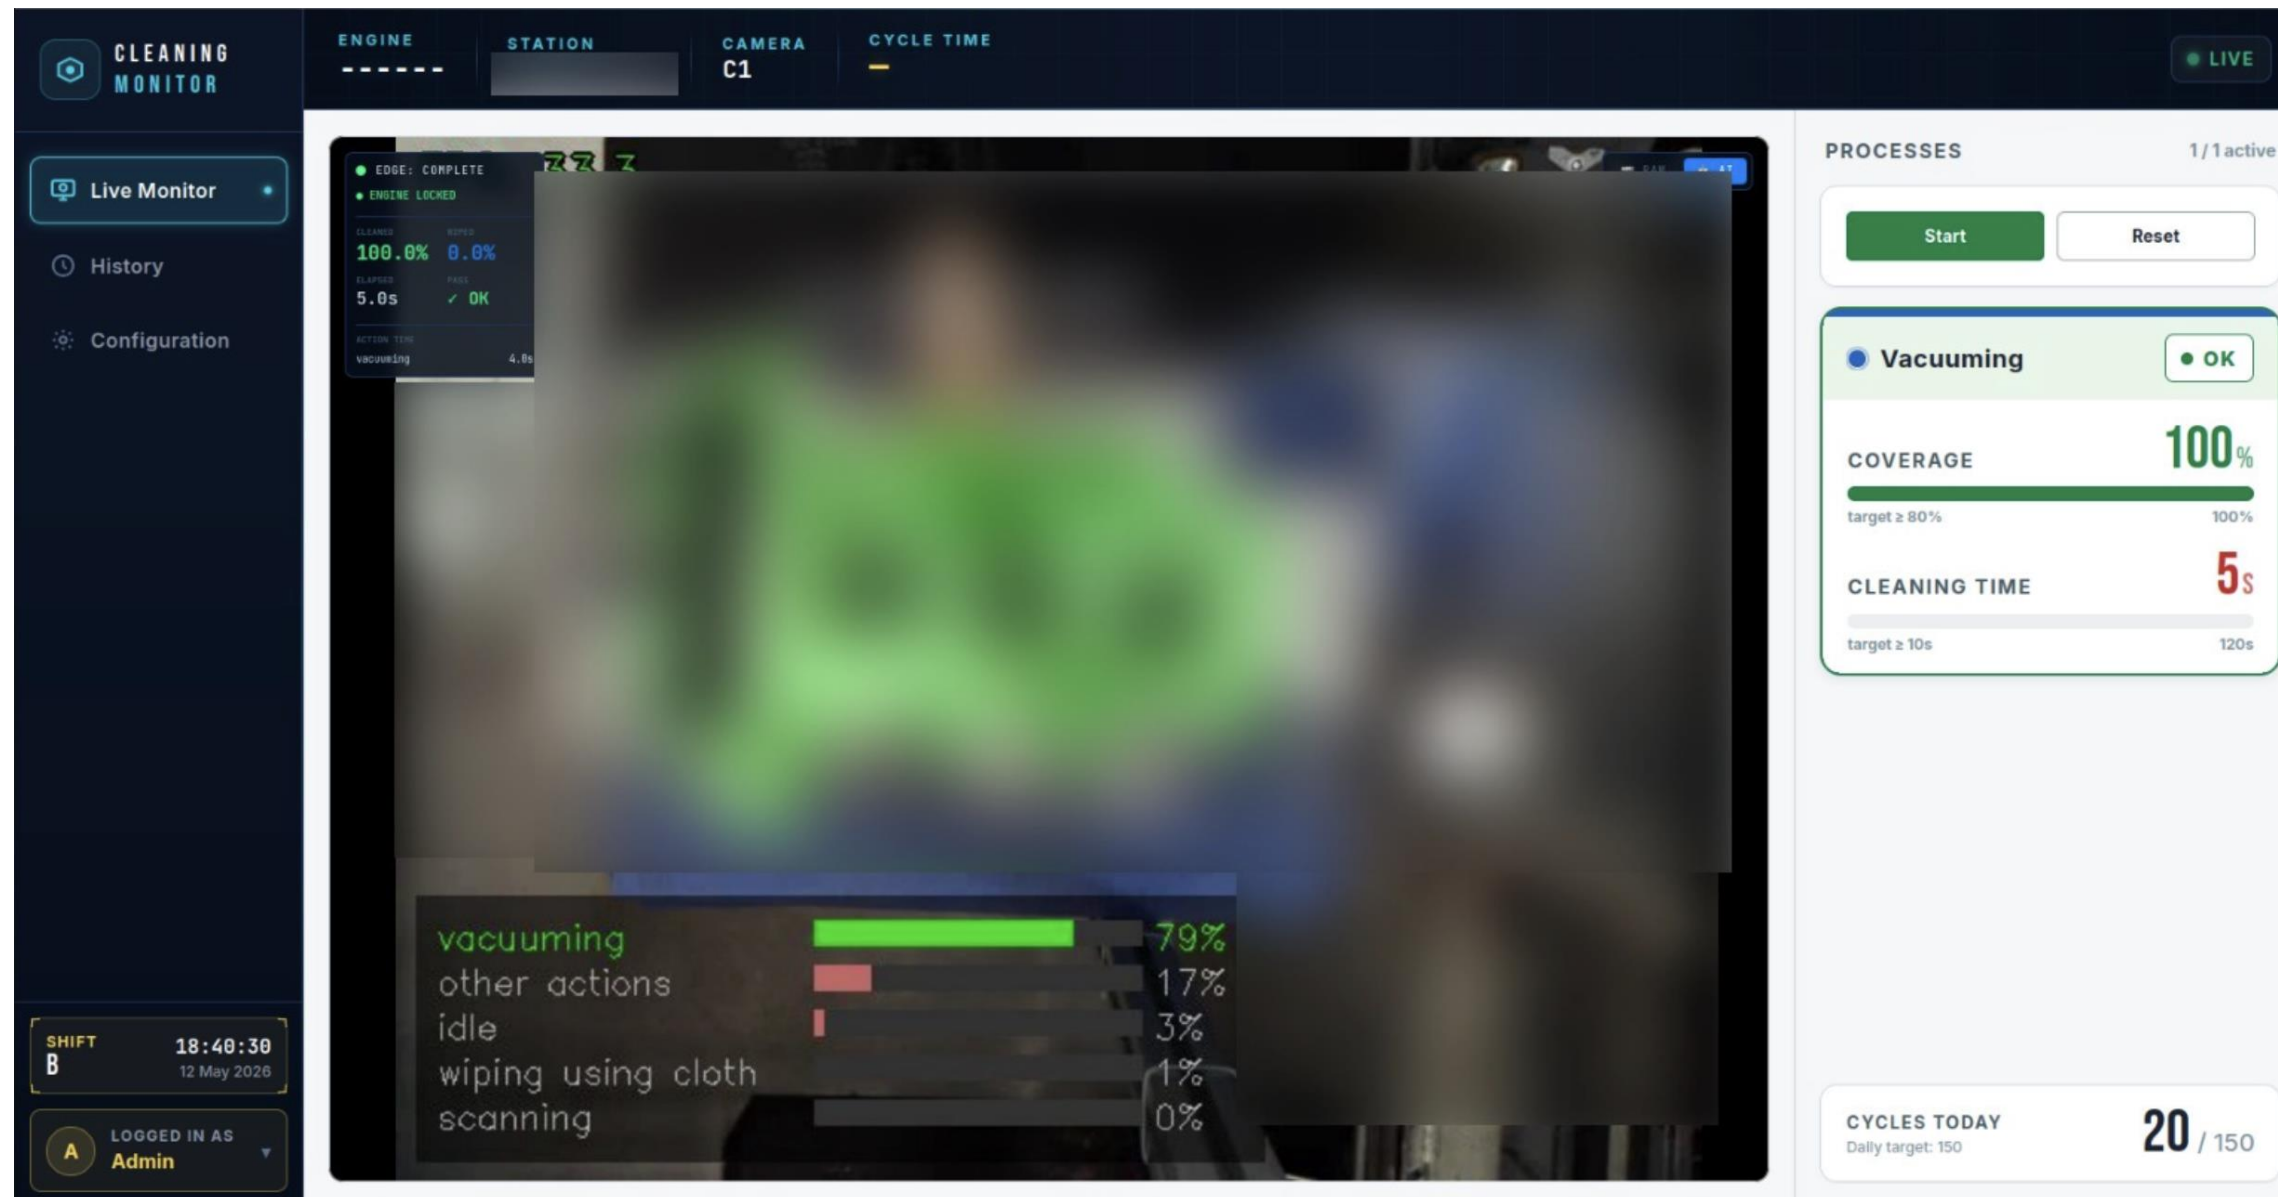

Industrial vision systems validating operator workflows with real-time traceability and deviation alerts.

# Live Production Deployment

Real-time workflow validation deployed inside active manufacturing operations.

- **Deployment:** Active production line
- **Environment:** Automotive OEM assembly
- **Inference:** Edge-based real-time monitoring
- **Integration:** PLC-integrated workflow

Workflow monitored: Engine block cleaning station at a global automotive OEM

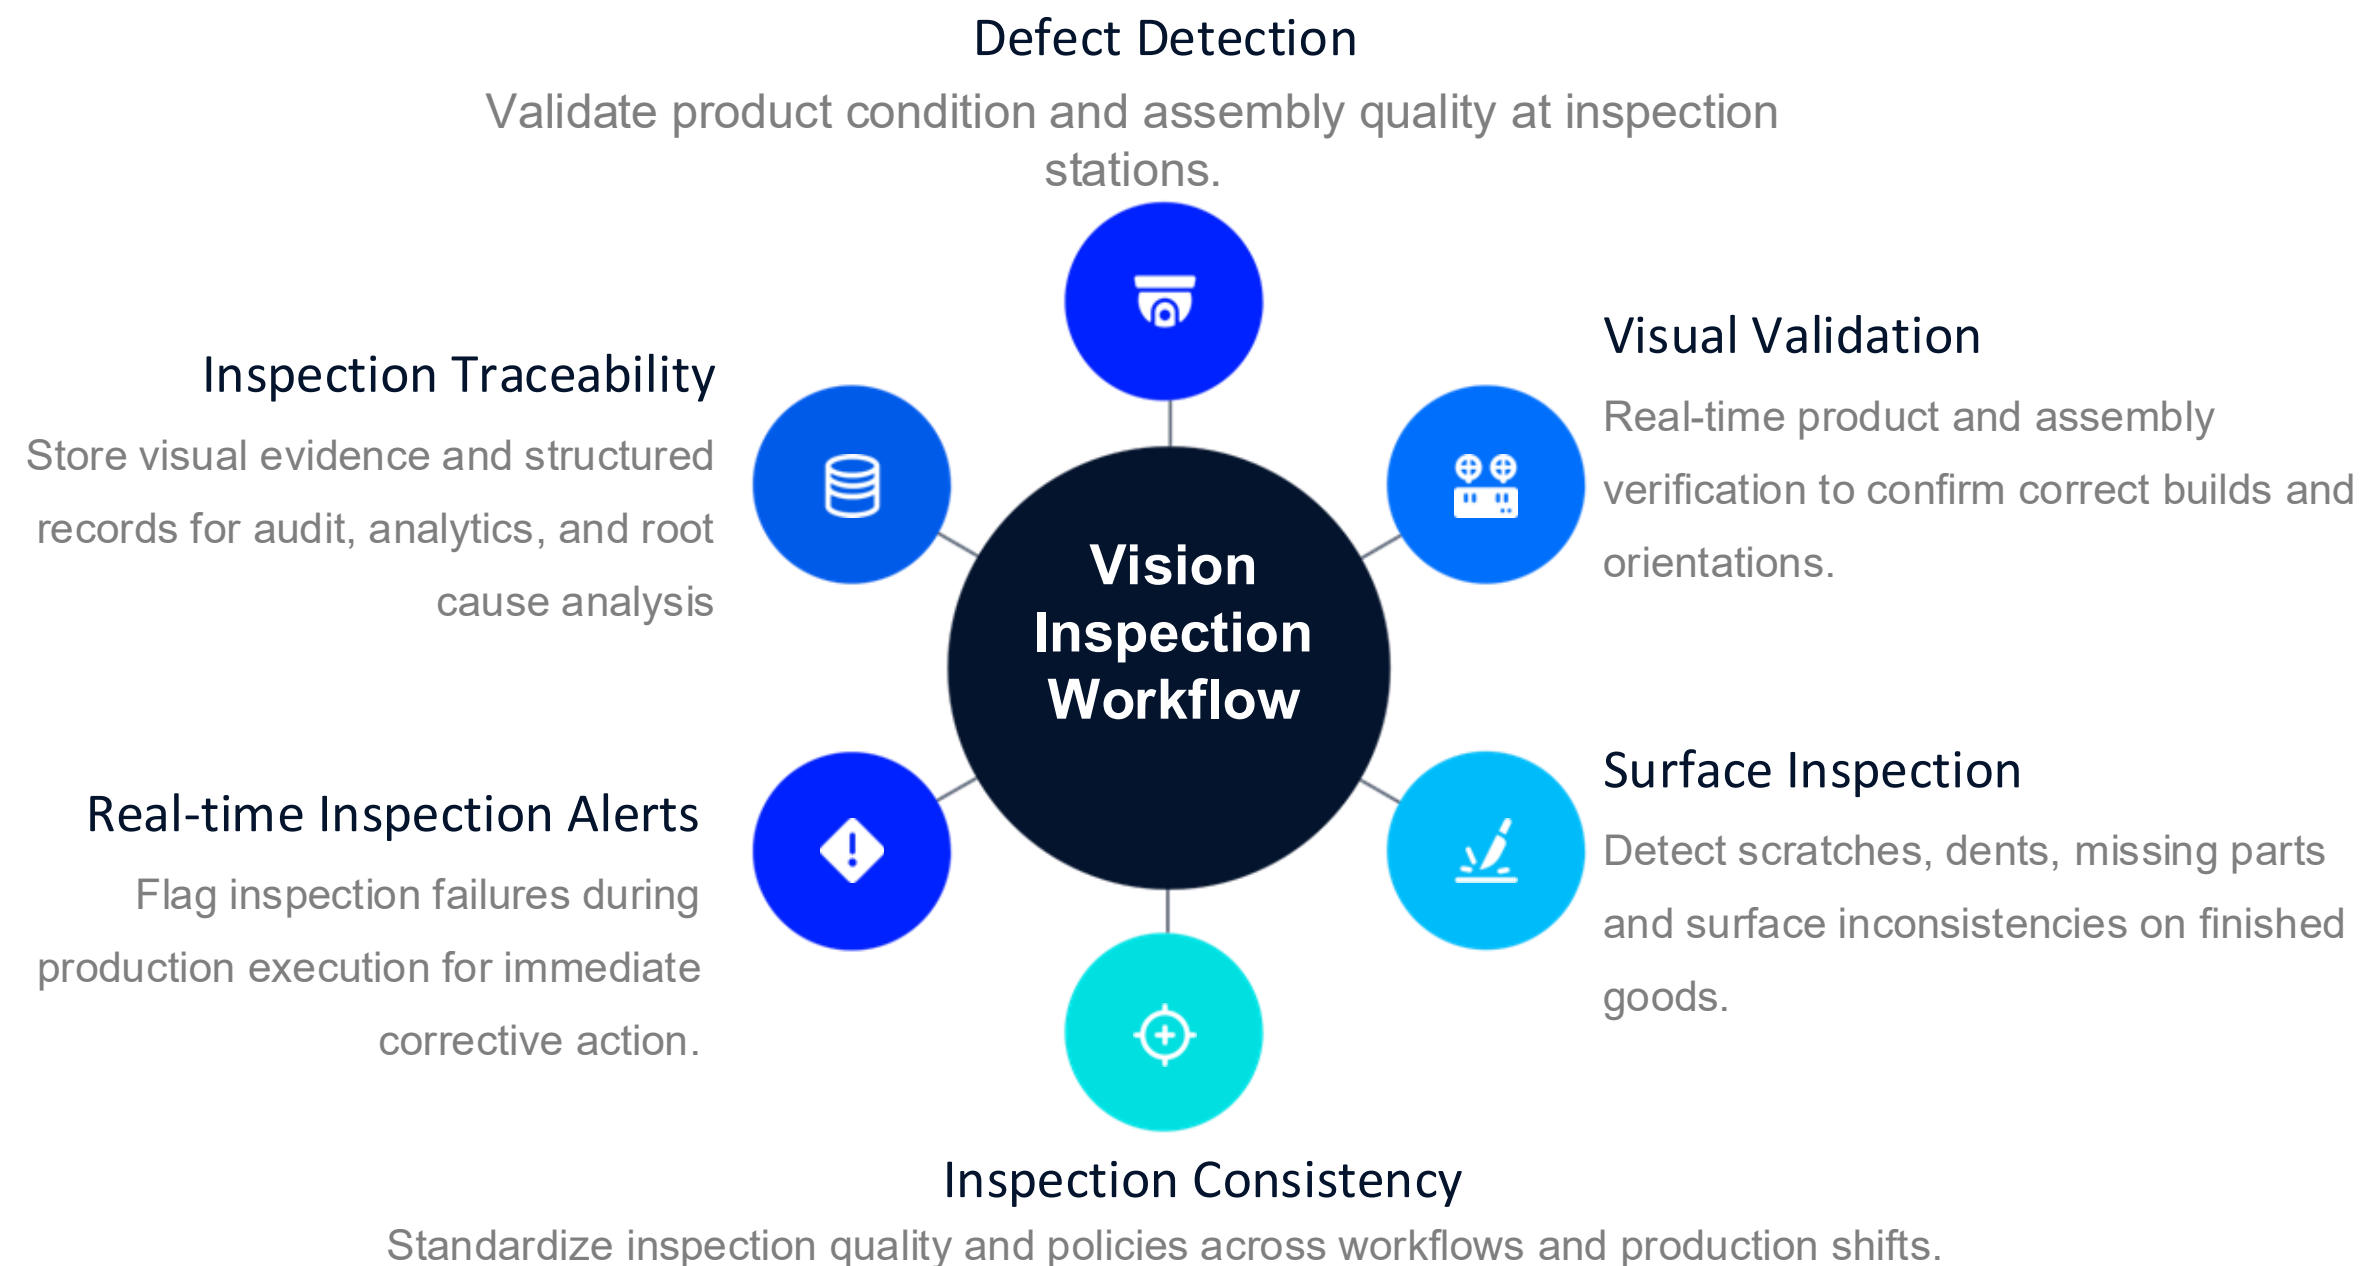

# 02

## Quality Inspection Intelligence

Vision-based inspection systems for defect validation, inspection traceability, and quality workflow execution

# Vision-Based Quality Inspection

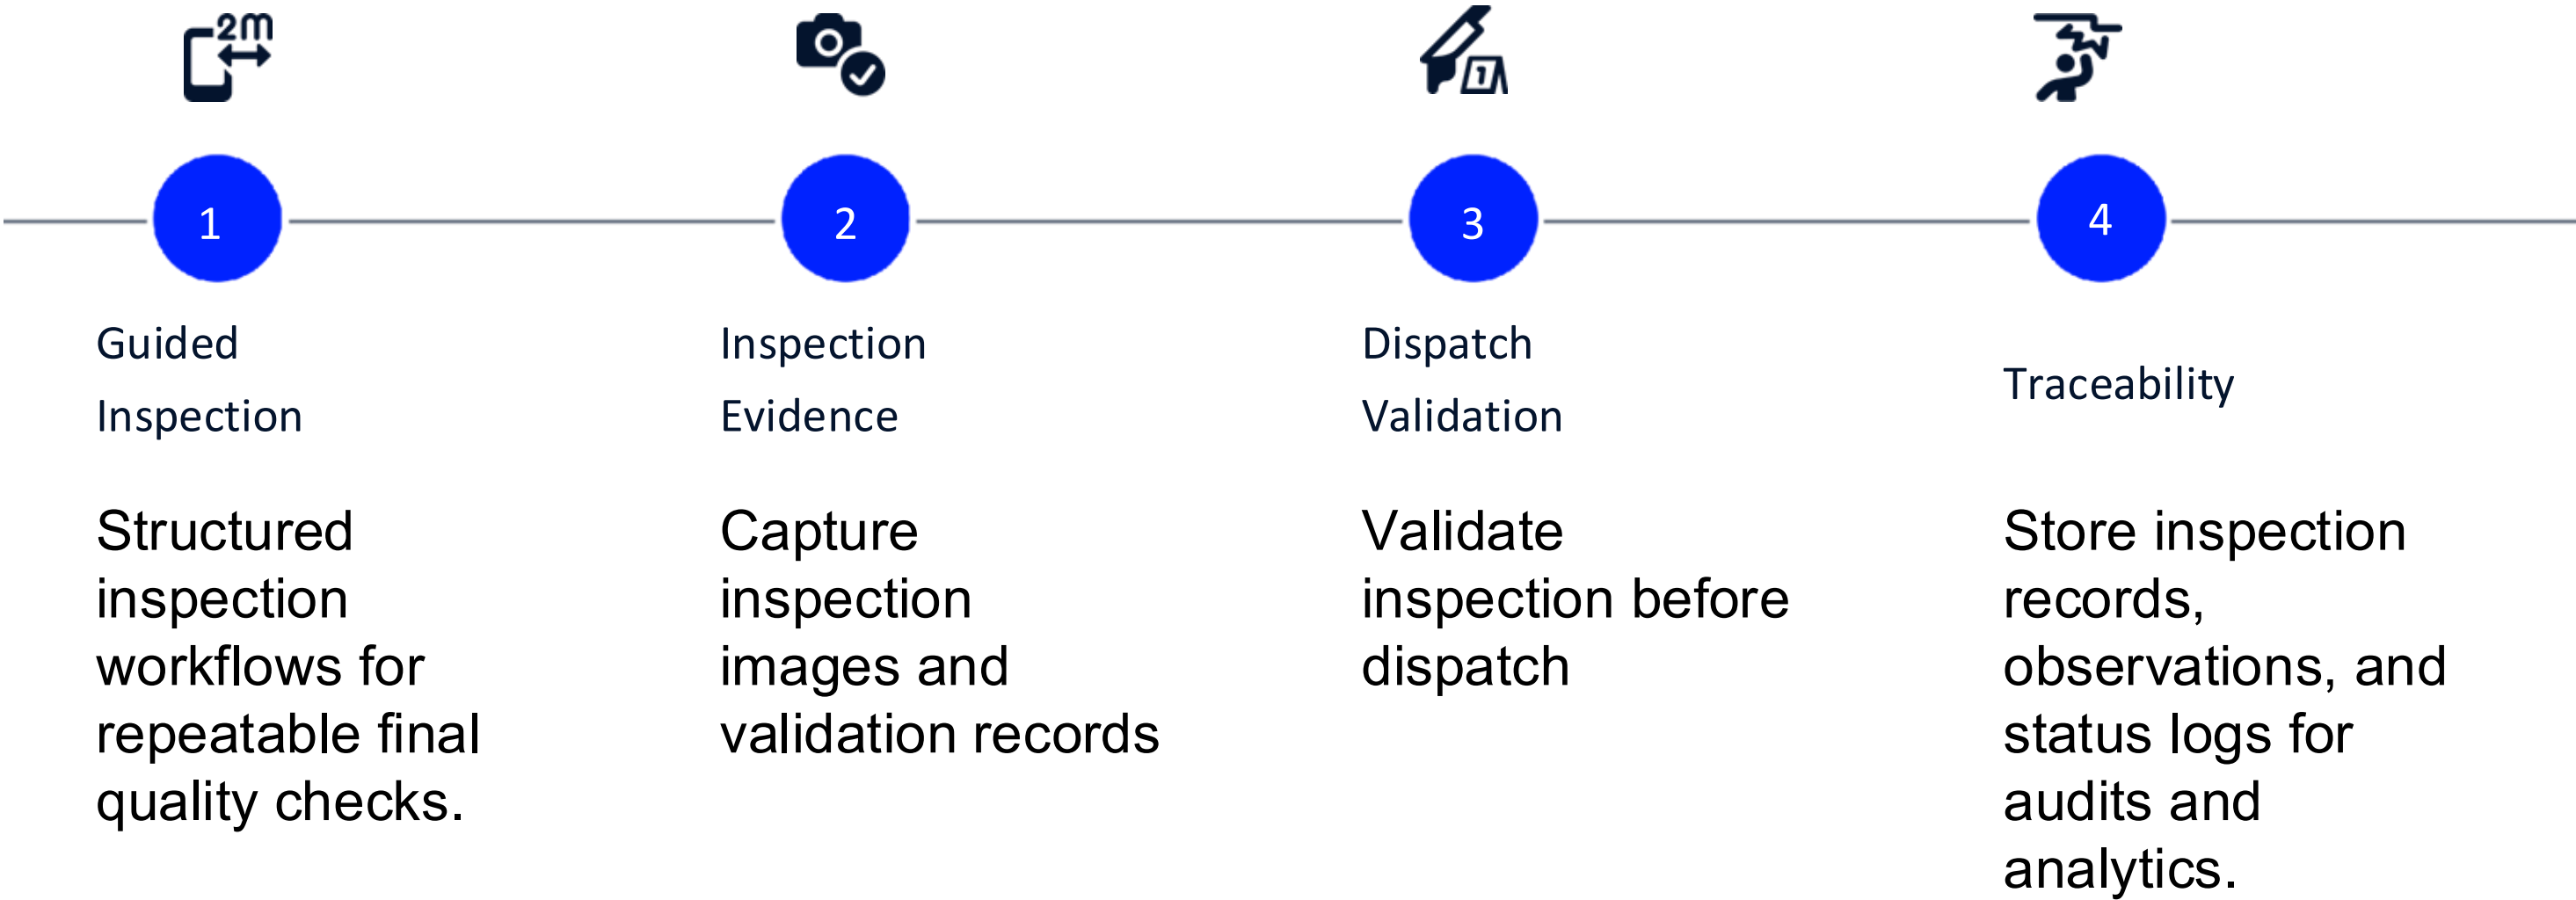

Computer vision systems for real-time inspection, defect validation, and auditable records across manufacturing workflows

# Final Inspection Execution System

Deliver structured inspection steps for final quality validation.

# 03

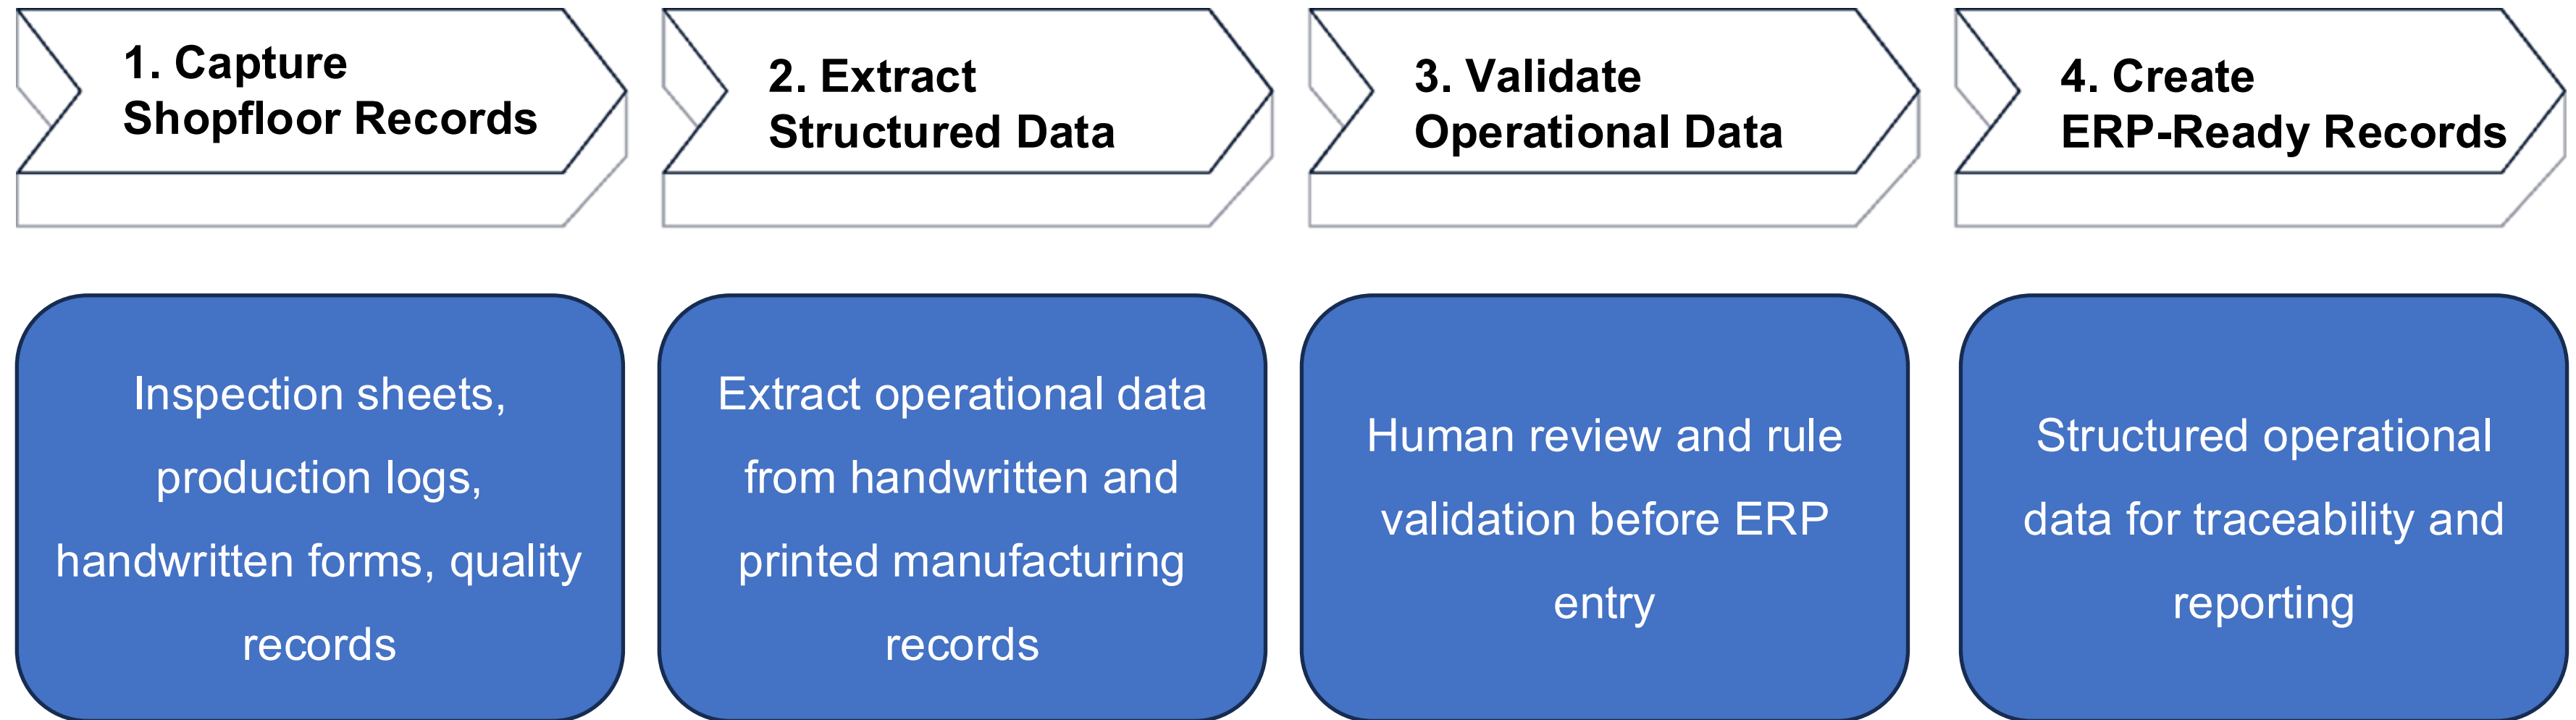

## Workflow Automation

---

Workflow automation systems for manufacturing operations, operational workflows, and manufacturing data digitization

# Manufacturing Record Digitization

Automating manual record entry to eliminate bottlenecks and errors while enabling real-time operational visibility for your manufacturing plant

# Manual Workflow vs Digitized Workflow

Replacing manual data entry with structured operational digitization

| Feature      | Legacy Manual        | BiztelAI                                           |
|--------------|----------------------|----------------------------------------------------|
| Data Entry   | Manual transcription | Automated extraction                               |
| Speed        | 24-48 hr delay       | Near real-time                                     |
| Effort       | Repetitive manual    | Validation-focused                                 |
| Consistency  | Entry errors         | Rule-based                                         |
| Scalability  | Requires staff       | Scales without proportional manpower increase      |
| Traceability | Manual tracking      | Searchable digital records with relevant analytics |

# 04

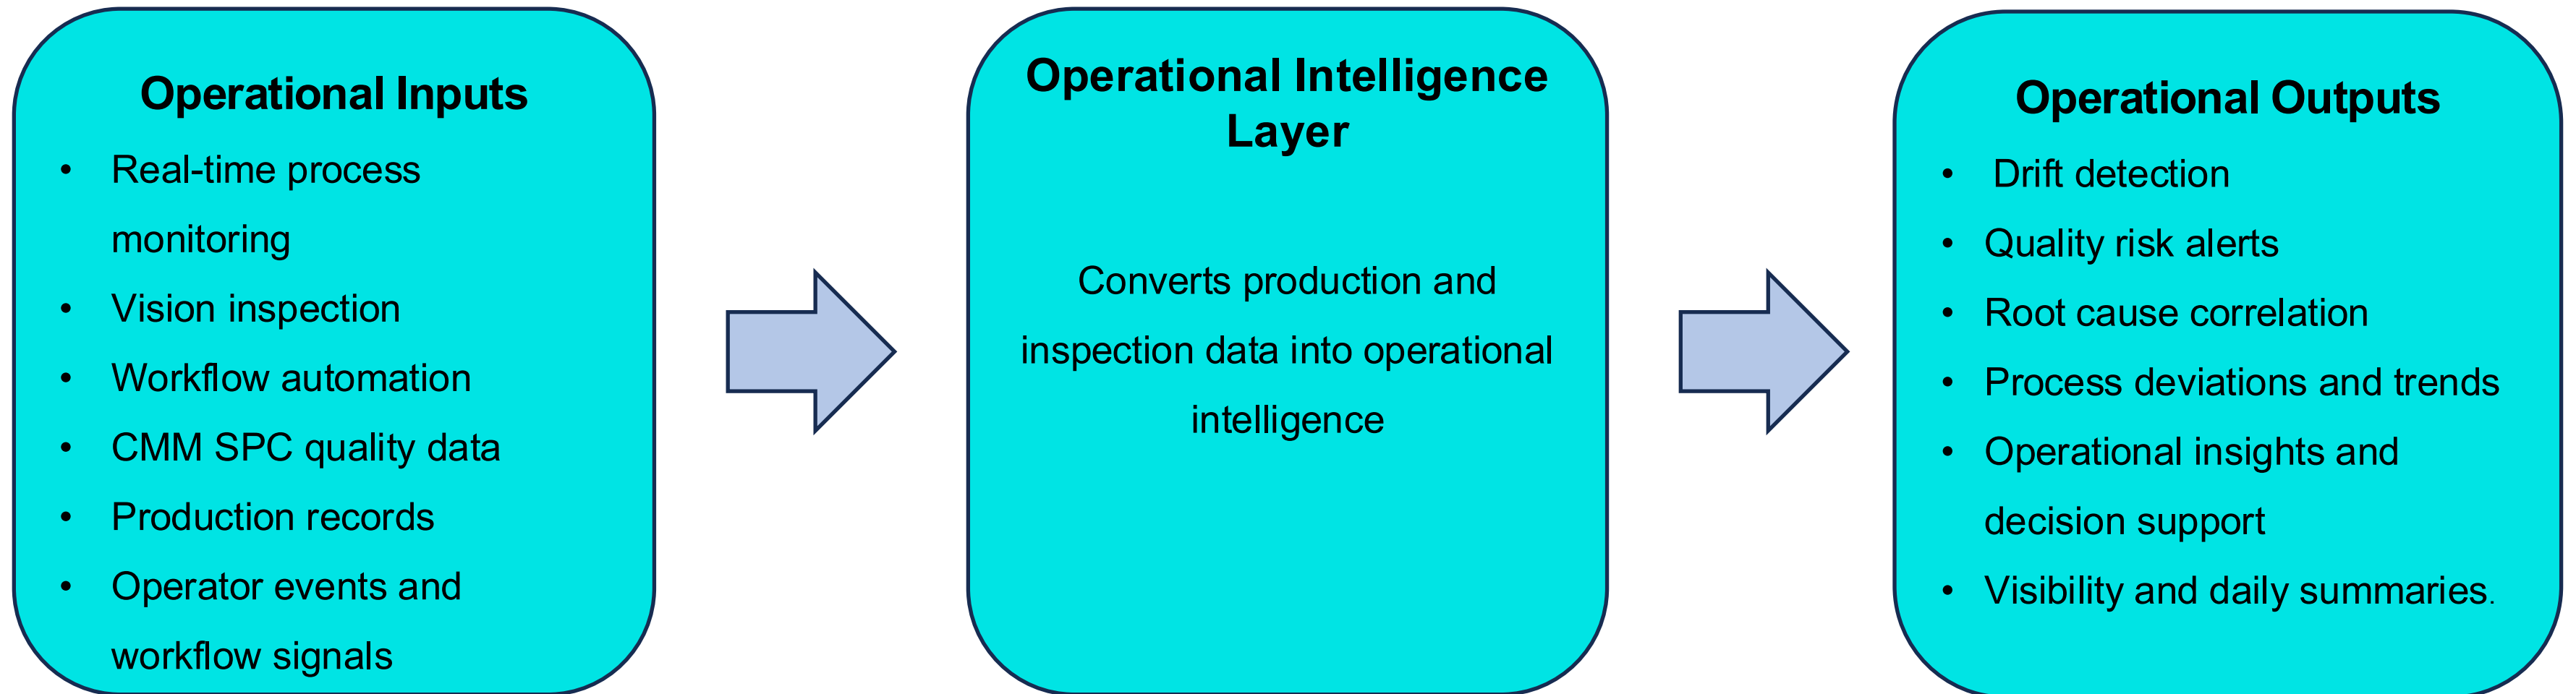

## Manufacturing Intelligence

Operational analytics and trend intelligence built on production and inspection workflows

# Manufacturing Intelligence Layer

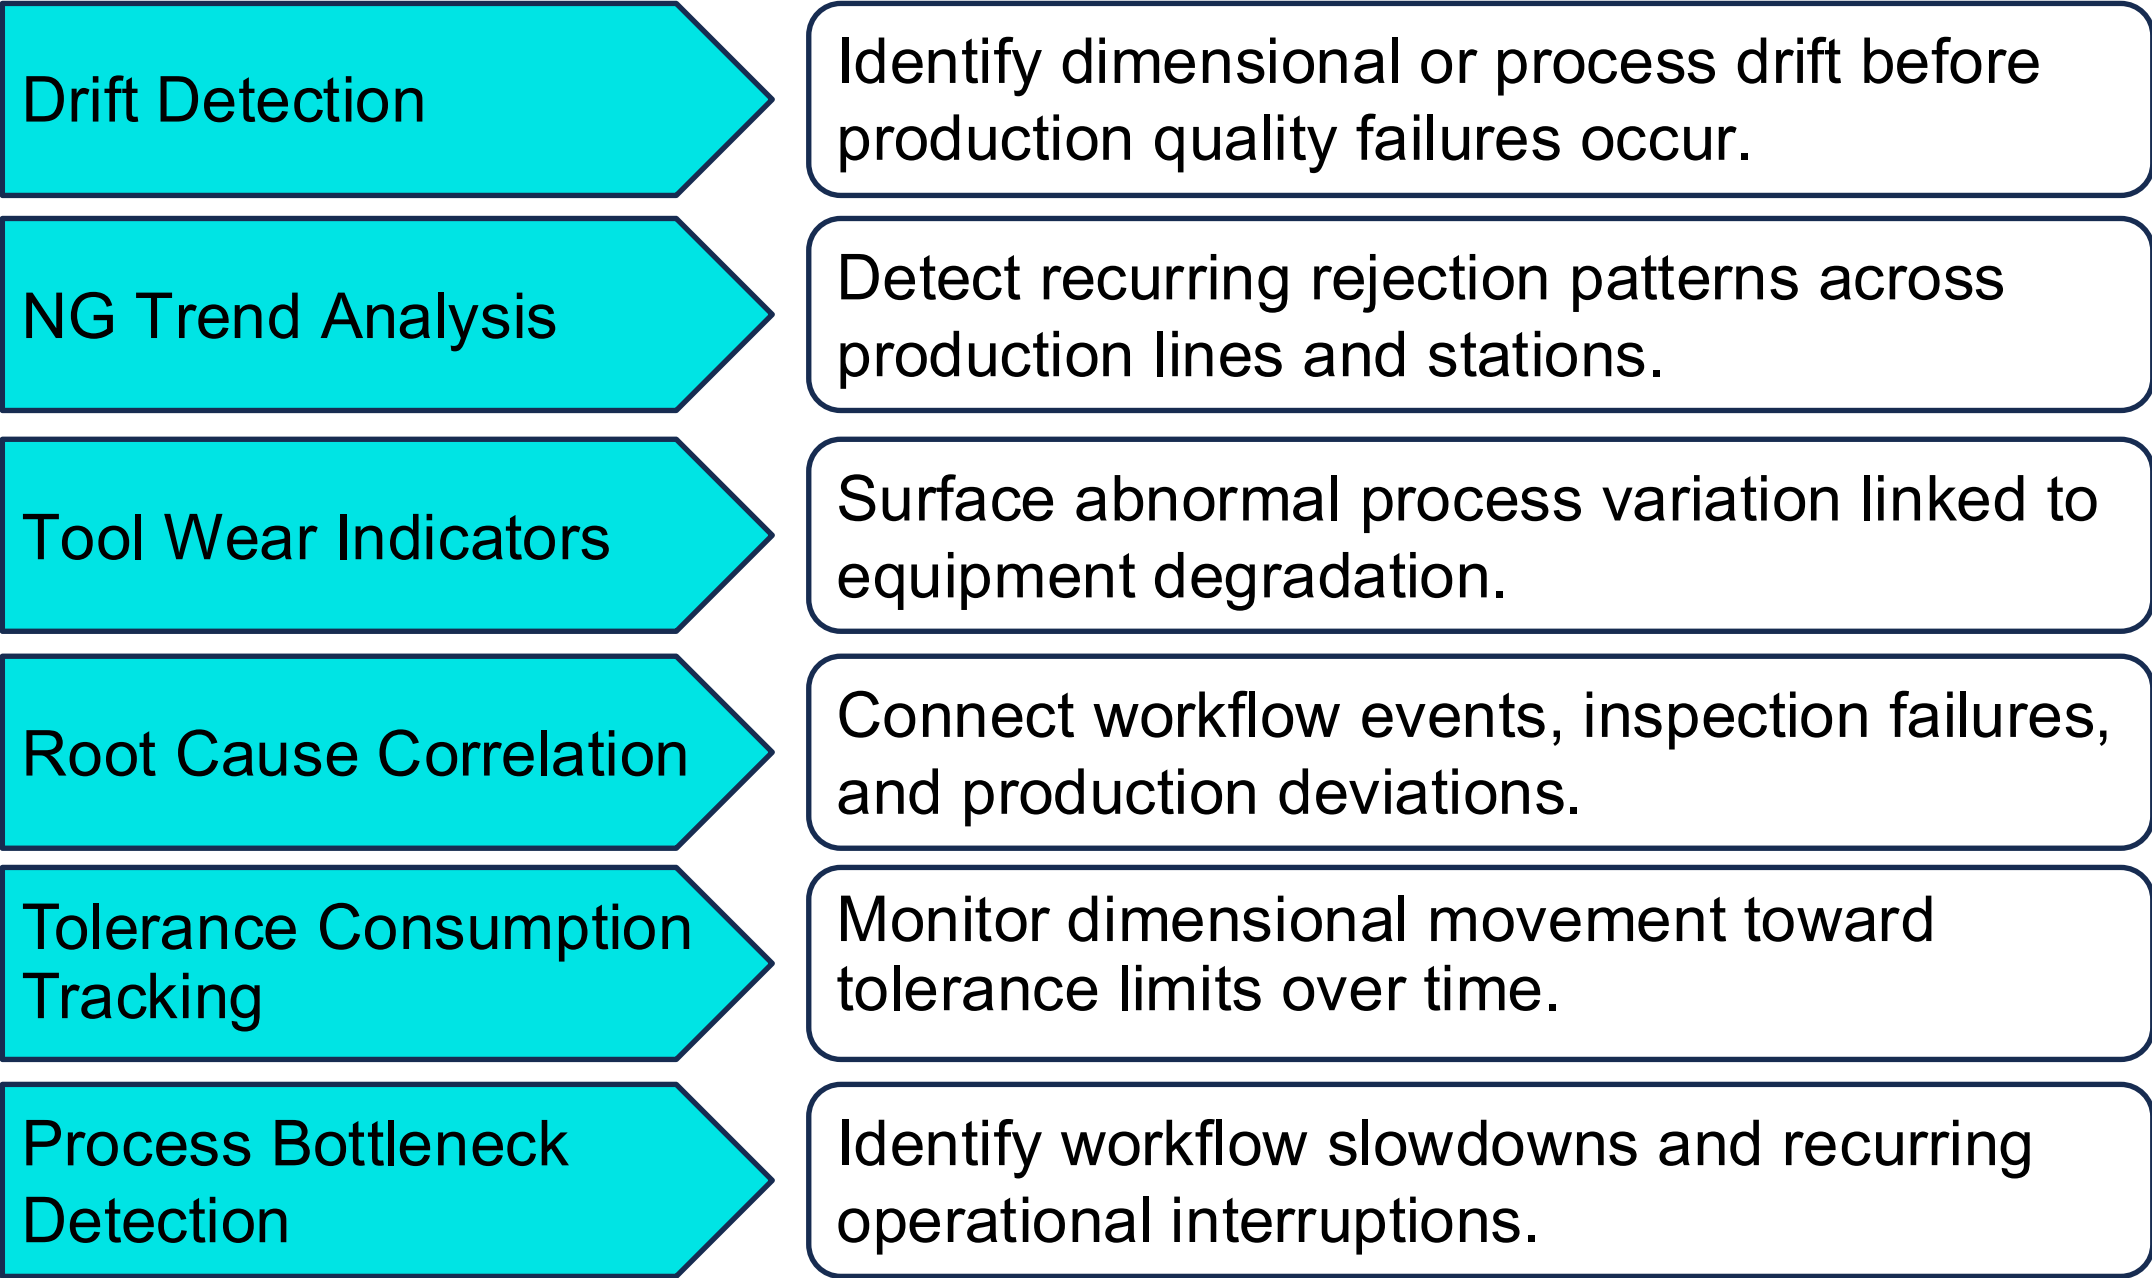

Turning production and inspection data into operational decisions.

# Manufacturing Intelligence Use Cases

Operational intelligence use cases for quality and production teams

# Start with One Workflow

Partner with BiztelAI to digitize manufacturing operations

# Start with One Workflow

Pilot one high-impact workflow, prove operational value, then scale

## Identify high-impact workflow

Select a single workflow with clear KPIs, high cycle frequency, and measurable quality or traceability gains

## Validate value and traceability

Measure throughput, defect reduction, and end-to-end traceability to confirm operational ROI and data integrity

## Plant-wide scaling

Roll out across lines and sites with centralized visibility, role-based dashboards, and repeatable deployment packages

## Pilot in controlled area

Deploy solution on one line or cell with defined scope, limited interfaces, and operator training to minimise disruption

## Modular expansion

Add adjacent stations and workflows using the same modular intelligence components and standardized integrations
